Dear Ms. Knowles:

On January 8, 2007, Ohio EPA received Von Roll America, Inc.'s request to redirect vapors from a pressurized tank in the Pump-Out Tank Farm to the atmosphere. For this modification, Von Roll America, Inc. submitted a Class 2 modification application¹. The Agency did not receive any verbal or written comments concerning this Class 2 modification application. I have enclosed the final modified Ohio hazardous waste facility installation and operation permit (Permit) that was issued by the director today. Please note that the modified Permit remains in effect until it is renewed, withdrawn, suspended or revoked.

You are hereby notified that this action of the Director is final and may be appealed to the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. The appeal must be filed with the Commission within thirty (30) days after notice of the Director's action. The appeal must be accompanied by a filing fee of \$70.00 which the Commission, in its discretion, may reduce if by affidavit you demonstrate that payment of the full amount of the fee would cause extreme hardship. Notice of the filing of the appeal shall be filed with the Director within three (3) days of filing with the Commission. Ohio EPA requests that a copy of the appeal be served upon the Ohio Attorney General's Office, Environmental Enforcement Section. An appeal may be filed with the Environmental Review Appeals Commission at the following address:

SUMMARY OF MODIFICATIONS TO HAZARDOUS WASTE
INSTALLATION AND OPERATION PERMIT

Von Roll America, Inc.
U.S. EPA ID #: OHD 980 613 541
Ohio ID #: 02-15-0589

Modification of the Hazardous Waste Facility Installation and Operation Permit will authorize Von Roll America, Inc., to make the following changes:

Class 2 Modification:

The modification will alter the vapor recovery system for the Pump-Out Tank Farm. Currently, in the event of a pressure buildup in a pump-out tank, the tank's rupture disk releases vapors to the vapor recovery system. The vapors are then directed to the rotary kiln incinerator and/or the facility's activated carbon adsorption system. The vapors have the potential to be volatile and, with the kiln as an ignition source, there is the risk of an explosion. This is what occurred on July 7, 2006 when a reaction in one of the pump-out storage tanks resulted in an explosion in the vapor recovery system.

The changes proposed in this modification will redirect vapors from a pressurized tank in the Pump-Out Tank Farm to the atmosphere. This piping change should greatly reduce the explosion risk thereby preventing a recurrence of the July 7, 2006 incident.
